

KOGI PLATFORM

BUSINESS PLAN

The Operating System for Independent Workers & Cooperatives

CONFIDENTIAL · 2025

1. Executive Summary

Kogi is an integrated platform designed for the future of work — a comprehensive operating system that empowers independent workers, freelancers, cooperatives, and small organizations to manage every dimension of their professional lives in one place. At a time when 59 million Americans freelance and cooperative enterprises are growing globally at 3x the rate of traditional businesses, Kogi is purpose-built for the people those institutions leave behind.

The platform unifies work management, financial services, marketplace access, community governance, and AI-powered intelligence into a single, coherent experience. Rather than forcing workers to juggle a dozen disconnected tools — Notion for projects, QuickBooks for finances, Slack for communication, Stripe for payments, Upwork for talent — Kogi collapses all of these into one integrated system where data flows freely across every module.

THE OPPORTUNITY

Kogi is not a productivity app, a bank, or a marketplace. It is the operating infrastructure for a new class of worker — one who needs enterprise-grade tools, cooperative finance, and AI assistance without the enterprise price tag or corporate employment relationship.

59M+ US Freelancers	\$1.4T Freelance Contribution to US GDP	3x Co-op Growth vs Traditional Biz	\$455B Global Gig Economy Market
-------------------------------	--	---	---

The Kogi Value Proposition

Independent workers and cooperatives face a paradox: they need more tools than salaried employees — invoicing, tax management, benefits, project management, talent sourcing, governance — but have fewer resources to pay for them and no IT department to integrate them. Kogi resolves this paradox by providing:

- A unified work management system with sprint boards, OKRs, backlog management, and resource tracking
- Portable financial services including banking, benefits, grants, crowdfunding, and cooperative payroll
- A talent marketplace and exchange for sourcing, contracting, and paying skilled workers
- Cooperative governance tools with voting, proposal management, and democratic treasury control
- An AI agent layer (Oba) that monitors all modules simultaneously and proactively surfaces insights and actions

Business Model Summary

Revenue Stream	Model	Target Segment	Year 1 Target
Platform Subscription	SaaS — tiered by seats and features	Freelancers, Cooperatives, Small Orgs	\$2.4M ARR
Transaction Fees	0.5–2% on marketplace, exchange, escrow	All active marketplace users	\$1.8M
Financial Products	Spread on banking, grant facilitation fee	Workers using kogi-bank	\$900K
Enterprise Licensing	Annual contract, unlimited seats	Worker-owned orgs, unions, DAOs	\$600K
Crowdfunding & Capital	3–5% platform fee on raises	Teams raising via Kogi	\$300K

2. Problem & Solution

The Problem: Fragmentation & Structural Exclusion

The modern independent worker navigates a fragmented, expensive, and often hostile landscape of tools and financial products. This fragmentation creates compounding costs — in time, money, and cognitive overhead.

Pain Point	Current "Solution"	Annual Cost / Impact
Project & work management	Notion, Jira, Asana — none built for indie workers	\$200–\$600/yr per worker
Banking & benefits	Traditional banks without portable benefits	Benefits gap: \$3,500–\$8,000/yr
Invoicing & payments	FreshBooks, Wave — disconnected from projects	\$120–\$300/yr + payment delays
Talent sourcing	Upwork, Fiverr — high platform fees (20%)	20% revenue loss on jobs
Governance & voting	No tooling exists for cooperative decision-making	Hours lost per governance cycle
Tax management	TurboTax at year-end — reactive, error-prone	\$500–\$2,000/yr compliance cost
Fundraising & investment	Angel List, WeFunder — inaccessible to co-ops	Raising takes 6–18 months avg

The Solution: One Integrated Operating System

Kogi consolidates every function above into a single platform with a unified data model. When a project milestone is marked complete, the system automatically prompts invoice creation. When an invoice is paid, the AI agent allocates funds across multiple wallet types and updates tax reserves. When a sprint is blocked, the platform searches its marketplace for contractors who match the required skill. This is not automation — it is integration. The intelligence that makes it work is context: every module shares the same data graph.

FINANCIAL IMPACT FOR USERS

The average Kogi user replaces 6–8 separate SaaS subscriptions. At a combined cost of \$200–\$800/month for those tools, Kogi delivers \$1,600–\$6,400 in annual savings — before accounting for time saved.

3. Product Overview

Kogi is architected as an integrated suite of modules, all connected through a shared data layer and a central intelligence engine. Each module is fully functional on its own, but the platform's compounding value emerges when they operate together.

CORE PLATFORM MODULES

3.1 Work Management System (KOGI-WMS)

A complete project and work management platform built for modern, portfolio-centric workers. The WMS organizes work in a hierarchy: Themes contain Initiatives, which contain Epics, which contain Stories, which contain Tasks. This mirrors how real projects are structured — from strategic objectives down to individual action items.

- Sprint boards, backlog management, and velocity tracking for agile teams
- OKR framework with real-time progress tracking against strategic goals
- Resource allocation and capacity planning across multiple projects simultaneously
- Integration with the marketplace for instant contractor sourcing when capacity is exceeded

3.2 Portfolio Management (kogi-portfolio)

The portfolio system is the organizational backbone of Kogi — a sophisticated container and relationship model that lets users structure any combination of projects, programs, resources, and assets. Unlike flat project tools, the portfolio system models nested hierarchies, tracks dependencies, and maintains a live graph of how everything relates.

3.3 Financial Services (kogi-bank)

Kogi Bank is a portable financial infrastructure layer designed for workers who lack traditional employment. It includes nine specialized account types, each designed for a specific financial purpose in a worker's life.

Account Type	Purpose	Key Feature
Portable Savings	Emergency & opportunity fund	Employer-independent portability
Income Protection	Buffer against income volatility	Auto-funded from each payment
Professional Development	Courses, certifications, tools	Employer match simulation
Health Savings (HSA)	Medical expenses	Pre-tax equivalent benefit
Retirement	Long-term wealth building	Portable across all clients

Operating Account	Day-to-day expenses	Integrated with invoicing
Tax Reserve	Quarterly estimated taxes	AI-calculated auto-transfer
Investment Pool	Portfolio investments	Cooperative pooling option
Emergency Savings	3–6 month runway fund	Locked with smart triggers

Beyond individual accounts, kogi-bank supports cooperative financial instruments: Group Investment Pools, Revenue Sharing Pools, Mutual Aid Funds, and Collective Escrow — enabling worker-owned organizations to manage shared capital with full transparency and democratic control.

3.4 Marketplace & Exchange

The Kogi Marketplace is a talent and resource exchange platform embedded directly in the work management flow. When a sprint is blocked, users can instantly post a request for talent. When a project completes, resources and deliverables can be transferred, sold, or shared through the Exchange.

- Talent listings with verified skill credentials and portfolio integration
- Resource trading: IP, code, designs, data, content, equipment
- Escrow-secured transactions with milestone-based release triggers
- Crowdfunding: pooled labor contributions with configurable reward rules

3.5 AI Agent Layer (Oba)

Oba is Kogi's AI assistant and agent framework — a proactive intelligence layer that monitors every module simultaneously and acts as a unified chief of staff. Unlike reactive chatbots, Oba runs continuous monitoring loops and surfaces insights the moment they become relevant.

- Morning briefing: cross-module synthesis delivered on platform open
- Sprint unblocking: automatic contractor search when stories are blocked
- Invoice recovery: drafted payment reminders for overdue accounts
- Governance alerts: vote summaries for decisions closing within 48 hours
- Capital intelligence: raise progress, cap table modeling, distribution scheduling
- Treasury monitoring: wallet reserves, tax automation, expenditure forecasting

4. Market Opportunity

\$64B Total Addressable Market	\$18B Serviceable Addressable Market	\$1.8B Serviceable Obtainable Market (Y3)
--	--	---

Market Segments

Segment	Size	Pain Level	Willingness to Pay	Priority
Independent Professionals (Freelancers)	59M in US alone	Very High	High (\$50–\$150/mo)	Primary
Worker-Owned Cooperatives	65,000+ in US	Extreme	High (\$200–\$800/mo)	Primary
Small Creative Agencies (2–20 people)	450,000 in US	High	Medium–High	Secondary
DAO & Web3 Organizations	Growing rapidly	High	High	Secondary
Unions & Labor Organizations	14M+ members	Medium	Medium (\$5–\$20/member/mo)	Tertiary
Social Enterprises & NGOs	1.4M in US	Medium–High	Medium	Tertiary

Competitive Landscape

Kogi competes across several categories simultaneously, which is also its strongest moat: no single competitor addresses the full stack.

Competitor	Category	Gap vs. Kogi
Notion / Linear / Asana	Work Management	No finance, no marketplace, no governance, no AI agent
QuickBooks / FreshBooks	Financial Software	No work management, no cooperative finance, no marketplace
Upwork / Fiverr	Talent Marketplace	Transactional only — no project or financial integration
Gusto / Rippling	Payroll & Benefits	Employment-based only — excludes independent workers

Loomio / Decidim	Governance Tools	Governance only — no finance, work, or marketplace
Relay / Mercury	Business Banking	Banking only — no integration with work or governance

COMPETITIVE MOAT

Kogi's deepest moat is integration depth. Each additional module a user adopts increases the switching cost exponentially — not linearly. A user managing work, finances, governance, and AI on Kogi faces an effectively prohibitive migration cost.

5. Go-To-Market Strategy

Target Customer Profile (Year 1)

Primary: Independent professionals and small cooperatives (2–20 people) who are currently paying for 3+ of the tools Kogi replaces. They are technology-literate, growth-oriented, and frustrated by the fragmentation of their current toolstack.

Secondary: Worker-owned businesses and DAOs seeking infrastructure for democratic governance, transparent finance, and coordinated work execution.

Acquisition Channels

Channel	Tactic	Expected CAC	Conversion Rate
Content Marketing	Guides on cooperative finance, freelance operations	\$18–\$35	3.5%
Community Partnerships	Partnerships with co-op federations, freelancer networks	\$25–\$60	6.0%
Product-Led Growth	Free tier with viral collaboration invites	\$12–\$22	8.0%
Influencer / Creator	Finance & productivity creators in gig economy space	\$40–\$80	2.5%
Direct Sales (Enterprise)	Outbound to unions, federations, DAO operators	\$500–\$1,200	12.0%

Pricing Strategy

Tier	Price	Seats	Key Features
Starter (Free)	\$0/mo	1 user	Work board, basic portfolio, community access
Solo	\$29/mo	1 user	Full work suite, kogi-bank accounts, AI briefing, marketplace access
Team	\$79/mo	Up to 5 users	All Solo features + governance tools, cooperative payroll, advanced analytics
Cooperative	\$199/mo	Up to 25 users	All Team features + capital exchange, crowdfunding, advanced AI, priority support
Enterprise	Custom	Unlimited	All features + white-label, dedicated success manager, custom integrations

6. Financial Projections

Revenue Forecast (5-Year)

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Total Users	8,500	28,000	72,000	160,000	320,000
Paying Subscribers	2,100	9,800	28,000	72,000	150,000
ARPU (Monthly)	\$48	\$58	\$68	\$74	\$82
Subscription Revenue	\$1.21M	\$6.82M	\$22.8M	\$63.9M	\$147.6M
Transaction Revenue	\$380K	\$1.9M	\$7.2M	\$22.1M	\$55.4M
Financial Products Rev.	\$220K	\$1.1M	\$4.8M	\$16.0M	\$38.2M
Total Revenue	\$1.81M	\$9.82M	\$34.8M	\$102M	\$241M
Gross Margin	68%	72%	76%	79%	81%
EBITDA Margin	-82%	-38%	4%	22%	31%

Use of Funds (Seed Round: \$3.5M)

Category	Allocation	Amount	Purpose
Engineering & Product	48%	\$1.68M	Full-stack hires, infrastructure, security
Sales & Marketing	22%	\$770K	Content, community partnerships, paid acquisition
Operations & Legal	12%	\$420K	Compliance, financial licenses, legal structure
Financial Infrastructure	10%	\$350K	Banking integrations, payment rails, escrow setup
Customer Success	8%	\$280K	Onboarding, support, retention

Key Assumptions

- Platform takes 18 months to reach product-market fit with paying co-op segment
- Monthly churn stabilizes at 2.8% after first cohort data (industry benchmark: 3.5%)
- Transaction volume grows at 3.2x revenue growth rate as marketplace activates
- LTV/CAC ratio reaches 4.8:1 by end of Year 2 with PLG flywheel operational
- Regulatory approval for banking services obtained by Month 14

7. Operations & Technology

Technology Architecture

Kogi is built on a modern, distributed architecture designed for scalability and resilience. The technology stack reflects deliberate choices prioritizing performance, developer velocity, and long-term maintainability.

Layer	Technology	Rationale
Intelligence Engine	Scala 3 (kogi-engine)	JVM performance, type-safe functional programming, actor model for analytics
Platform Services	Go microservices	Fast compilation, low memory, excellent concurrency primitives
Web Application	Angular	Enterprise-grade SPA framework, strong TypeScript integration
Mobile Applications	Kotlin (Android) / Swift (iOS)	Native performance, platform-appropriate UX
Desktop Application	Java	Cross-platform deployment, familiar enterprise runtime
Build System	Bazel	Hermetic, incremental builds across polyglot monorepo
Kernel / Host	Zig / Rust	Memory safety without GC, ideal for high-performance host layer
Data Layer	PostgreSQL + Kafka + Redis	Proven relational + event streaming + cache topology

Distributed Architecture

Each Kogi deployment runs as a distributed node network. Nodes elect leaders using Raft/Bully consensus, enabling fault tolerance and horizontal scaling. The kogi-engine intelligence layer can be federated across multiple nodes with CRDT-based state synchronization for eventual consistency without coordination overhead.

Data Security & Privacy

- End-to-end encryption for all financial transactions and sensitive user data
- Role-based access control with fine-grained permissions at the resource level
- Immutable audit logs for all financial operations and governance actions
- SOC 2 Type II certification roadmap beginning in Month 8
- GDPR and CCPA compliant data architecture from initial design

8. Team & Traction

Current Traction

MVP All modules implemented	13 Design documents completed	22+ Platform tools designed	12 AI workflows specified
---------------------------------------	---	---------------------------------------	-------------------------------------

Kogi has completed a comprehensive design and specification phase covering every major platform subsystem. The codebase reflects an integrated MVP with all sub-engines of kogi-engine implemented and validated. The platform is ready for focused engineering investment to bring the complete integrated experience to market.

Hiring Plan (Year 1)

Role	Priority	Hire Timeline	Focus
CTO / Lead Architect	Critical	Month 1	Platform architecture, team building
Full-Stack Engineers (x3)	Critical	Month 1–2	Frontend, API, mobile
Backend / Infrastructure (x2)	Critical	Month 2–3	Scala engine, Go services, DevOps
Head of Growth	High	Month 3	PLG strategy, content, partnerships
Cooperative Community Lead	High	Month 4	Co-op segment activation, partnerships
Product Designer	High	Month 2	UI/UX polish, design system
Customer Success Lead	Medium	Month 5	Onboarding, retention, support

9. Risk Factors & Mitigation

Risk	Probability	Impact	Mitigation
Regulatory — banking license delays	Medium	High	Partner with existing bank or BaaS provider while pursuing own license
Competitive response from established players	High	Medium	Deep integration moat; focus on cooperative segment incumbents don't serve
Long sales cycle for enterprise co-ops	High	Medium	PLG-first motion; free tier creates bottom-up adoption before top-down sales
Engineering complexity / timeline overrun	Medium	High	Modular architecture; MVP scoped to core loop; phased feature release
Churn in early cohorts before PMF	Medium	Medium	Cohort-based product iteration; retention playbook from Month 1
Data security breach	Low	Very High	Security-first engineering; third-party audit; insurance; SOC 2 roadmap

10. Product Roadmap

Phase	Timeline	Key Deliverables	Milestone
Phase 1: Foundation	Months 1–4	Core work board, basic portfolio, kogi-bank accounts, user auth, web app	First 500 paying users
Phase 2: Worker Operations	Months 4–6	Full WMS, marketplace listings, invoicing, AI briefing, governance basics	First co-op on platform
Phase 3: Network & Finance	Months 6–9	Cooperative payroll, crowdfunding, capital exchange, community features	\$1M ARR milestone
Phase 4: Intelligence	Months 9–12	Full Oba AI agent, advanced analytics, recommendation engine, mobile apps	Series A ready
Phase 5: Scale	Months 12–18	Enterprise features, API platform, white-label, international expansion	\$10M ARR milestone

PRODUCT STRATEGY

The platform's phased approach ensures each phase delivers standalone value while building toward the full integrated vision. Users who join in Phase 1 immediately benefit from the work board, but they are already positioned to unlock the compounding value of financial integration, AI intelligence, and cooperative governance as each phase ships.

11. The Kogi Opportunity

The future of work is not a single employer, a single office, or a single career path. It is a portfolio — of clients, projects, skills, relationships, and assets — managed by increasingly sophisticated independent professionals who deserve the same tools and financial infrastructure that corporations take for granted.

Kogi exists to give those people what they've been missing: a platform that is as ambitious as they are. One that manages their work, grows their wealth, connects them with talent, governs their organizations, and learns from everything they do — all in one place, all working together.

The market is enormous, the problem is real, the technology is built, and the timing is right. We are looking for partners who see the same future we do — and who want to help build the infrastructure that powers it.
