

KOGI

Independent Worker Operating System

Resource Management System

System Design Document

v1.0 · Kogi Platform · March 2026

1. Overview

The Kogi Resource Management System (KOGI-RMS) is the unified layer for discovering, organizing, allocating, governing, and tracking every resource on the Kogi platform. A resource is any entity — structured or unstructured, human or non-human, tangible or intangible — that has value, can be acted upon, and can be associated with a Portfolio component.

KOGI-RMS is not a separate application. It is the resource substrate that underlies every other Kogi module: Portfolio, Work Management, Bank, Marketplace, Exchange, Community, and Studio. Every item described in this document is a first-class Resource object with a common metadata envelope, typed schema, lifecycle state machine, access control, and analytics hooks.

Domain	Resource Categories Covered
Portfolio & Work	Portfolios, programs, projects, assets, artifacts, binders, journals, books, dossiers, folders, documents, files, directories
Planning & Time	Timelines, schedules, roadmaps, calendars, Gantt charts
Work Execution	Boards, epics, stories, features, tasks, work packages, WBS items, initiatives, strategies, themes
Commerce & Contracts	Gigs, bookings, consultations, jobs, contracts, offers, deals, requests, proposals, bids, investments
Capital & Physical	Capital, financial assets, artifacts, labor, land, estates, real estate
Finance & Instruments	Equity, liquidity, debt, taxes, cash, credit, debit, donations, grants
Contributions	Labor, skills, financial, support, advertising, marketing, promotions, endorsements, donations, investments
Users & Roles	Members, contributors, donors, investors, subscribers, followers, watchers, owners, editors
Personas	Developers, creatives, artists, professionals, architects, organizers, activists, technologists, and more
Workers	Contractors, consultants, gig workers, freelancers, entrepreneurs, coaches, employees, officers
Organizations	Autonomous orgs, open source communities, cooperatives, collectives, federations, councils, assemblies

2. Core Resource Data Model

Every resource on the Kogi platform is an instance of the base Resource object. Typed resources extend this base with domain-specific fields. All resources are Portfolio Components and inherit CRDT versioning, EventLog auditing, and PolicySet governance.

2.1 Resource Base Schema

Field	Type	Description
resource_id	UUID	Platform-wide unique identifier; immutable
resource_type	ResourceType	Top-level classification — see Resource Type Taxonomy (§3)
resource_subtype	String	Domain-specific subtype (e.g., Portfolio, Gig, HSA, Land)
name	String	Display name
slug	String	URL-safe unique handle
description	String	Rich-text description; markdown supported
status	ResourceStatus	Draft Active Paused Archived Deleted
visibility	Visibility	Public Private Protected Space Organization Invite
owners	Vec<EntityId>	One or more users or orgs with Owner privilege
editors	Vec<EntityId>	Users or orgs with Edit privilege
contributors	Vec<EntityId>	Users or orgs with Contribute privilege
viewers	Vec<EntityId>	Users or orgs with View privilege
tags	Vec<String>	Hashtag-style discovery tags; full-text indexed
labels	Vec<String>	Structured classification labels; filterable
categories	Vec<CategoryEnum>	Domain category set (Product, Finance, Creative, Ops, etc.)
policy_ids	Vec<PolicyId>	Governance policies; inherited from parent unless overridden
parent_ids	Vec<ComponentId>	Parent resources in hierarchy
children_ids	Vec<ComponentId>	Child resources in hierarchy
linked_ids	Vec<ComponentId>	Lateral links to related resources
attachments	Vec<ArtifactId>	Attached files, documents, and CMS artifacts
metadata	Map<String, Value>	Extensible key-value metadata bag
created_at	DateTime	ISO 8601 creation timestamp; immutable
updated_at	DateTime	Last mutation timestamp; auto-managed
vector_clock	VectorClock	CRDT conflict resolution; auto-managed by platform

Field	Type	Description
event_log	Vec<EventRecord>	Append-only audit history of all mutations
analytics_id	AnalyticsRef	Pointer to AnalyticsEngine time-series for this resource

2.2 Resource Actions (Universal)

All resources support the following action surface regardless of type. Additional type-specific actions are defined in each domain section.

Action Group	Actions
Discovery	search · filter · index · tag · label · mention · hashtag · topic · recommend · discover · explore
Social	like · comment · share · follow · subscribe · watch · save · bookmark · poll · survey · invite
Content	view · preview · download · fork · clone · embed · export · print · archive
Governance	own · edit · CRUD · post · report · flag · approve · reject · propose · vote
Commerce	donate · invest · fund · bid · offer · deal · trade · allocate · contribute
Lifecycle	create · draft · publish · pause · unpublish · delete · restore · version · snapshot
Collaboration	assign · delegate · request · respond · notify · alert · broadcast · message

3. Resource Type Taxonomy

Resources are organized into eight top-level domains. Each domain has a primary type enum and a subtype registry. New subtypes can be registered at runtime without schema migration.

3.1 Portfolio & Work Resources

Domain: PORTFOLIO_WORK — Structured knowledge and work artifacts

Resource	Subtype	Description
Portfolio	Personal Work Professional Collective Public Custom	Top-level container organizing all of a user's or org's work, assets, and goals
Program	Standard Agile Initiative Cooperative Federation	Multi-project coordinated effort aligned to a strategic objective
Project	Standard Sprint Campaign Research Event	Time-boxed effort producing a defined set of deliverables
Asset	Digital Physical Financial IP Brand Data	Anything of value owned or controlled by a user or org
Artifact	Document Design Code Media Report Export Template	A discrete, versioned output produced during work
Binder	Collection Curated Smart Shared	Logical grouping of related resources; ordered or tagged
Journal	Work Personal Research Decision Project	Chronological record of activities, decisions, or observations
Book	Notebook Playbook Guidebook Contactbook Schedulebook Planbook Itembook	Structured document containers — see Book Type Registry
Dossier	Person Organization Topic Deal Case	Research-oriented profile package for a subject
Folder	Standard Smart Shared Archive	Hierarchical file system container; maps to filesystem path
Document	Brief Report Memo SOP Policy Agreement Contract Framework Model	Rich-text structured document; versioned; e-signature capable
File	Image Video Audio PDF Spreadsheet Archive Binary	Raw binary or media file; attached to parent portfolio items
Directory	Workspace Project Space Organization	Spatial collection of resources; navigable; permissioned
Registry	Asset Skill Grant Contact Vendor Member	Catalogued, searchable, governed registry of typed resources

Resource	Subtype	Description
Archive	Portfolio Project Program Space	Deep storage; full restore; read-only by default

Book Type Registry

Book Type	Purpose & Contents
book:notebook	Freeform notes, annotations, ideas; linked to any portfolio item
book:playbook	Repeatable process playbooks; steps, roles, checklists, templates
book:guidebook	Documentation set; structured sections; publishable as external docs site
book:contactbook	Structured contact directory; linked CRM profiles and relationship metadata
book:schedulebook	Scheduling templates, availability rules, booking patterns
book:planbook	Planning artifact; phase gates, milestones, resource plans, risk registers
book:itembook	Catalogued collection; charter · catalogue · library · templates · logs

3.2 Planning & Time Resources

Domain: PLANNING_TIME — Time-axis visualization and coordination

Resource	Subtypes	Description
Timeline	Project Program Portfolio Personal Public	Chronological view of milestones, events, and item states across any time range
Schedule	Work Booking Crew Equipment Personal Recurring	Specific time-slot assignments for workers, resources, or events; conflict-aware
Roadmap	Product Platform Organization Community Release	Strategic milestone map; external-publishable; investor-ready view
Calendar	Work Personal Team Organization Public Booking	Day/week/month event and deadline calendar; unified across modules
Gantt	Project Program Portfolio Campaign	Dependency-aware bar chart; critical path detection; resource allocation overlay
Timebox	Sprint PI Quarter Custom Duration	Bounded planning period committing a set of work items; parent-child hierarchy
Roadblock	Dependency Blocker Risk Constraint	Structured impediment record linked to timeline items; escalation workflow
Milestone	Release Phase Goal Event Deliverable	A significant checkpoint or decision point; governance gate optional

3.3 Work Execution Resources

Domain: WORK_EXECUTION — Work breakdown and agile delivery items

Resource	Level / Scope	Description
Theme	Portfolio level	Broadest strategic investment area; parent of multiple initiatives
Strategy	Portfolio / Org level	Direction-setting resource; defines approach, principles, and trade-offs
Initiative	Program level	Coordinated set of epics or projects advancing a theme or strategy
Epic	Program / PI level	Large capability; decomposed into stories; fits a PI or quarter
Feature	Sprint / Epic level	User-facing capability delivering discrete value; subset of an epic
Story	Sprint level	Primary delivery unit; estimable, testable, completable in a sprint

Resource	Level / Scope	Description
Task	Daily level	Atomic execution step within a story; hours or sub-day scope
Work Package	WBS node	Any addressable WBS node carrying story.data and story.type
Board	Project / Team view	Kanban, agile, resource, program, or custom visual management surface
Backlog	Project / Program	Ordered, prioritized list of uncommitted work items
Tactic	Operational level	Specific action executing a strategy within a timebox
Operation	Recurring / Ops	Ongoing or recurring operational work: support, maintenance, monitoring
Goal	OKR / Planning	Desired outcome; parent of key results or epics
Objective	OKR level	SAFe / OKR objective: aspirational quarterly or PI-level direction
Key Result	OKR level	Measurable outcome proving an Objective is being achieved
Risk	Any level	Identified risk with probability, impact, owner, and mitigation plan
Dependency	Any level	Explicit dependency link between two work resources; tracks resolution
Release	Program / Project	Versioned bundle of features and stories delivered to users
Deployment	Ops / Engineering	A specific deployment event; environment, version, rollout strategy

3.4 Commerce & Contract Resources

Domain: COMMERCE_CONTRACTS — Work sourcing, deal flow, and agreements

Resource	Subtypes	Description
Gig	Task Project Retainer One-time Recurring	A discrete, scoped unit of work listed on the Marketplace; claimable by qualified workers
Consultation	Single Package Retainer Group Workshop	Advisory engagement sold by a worker or org; time-bounded; bookable
Booking	Service Event Studio Venue Equipment Team	Confirmed time reservation linking a client, worker, and resource package
Job	Contract Part-time Full-time Project Internship	Employment or contractor engagement with defined terms and compensation
Contract	Service Employment NDA License Partnership Revenue-Share	Legally binding agreement; e-signature workflow; version-controlled
Agreement	MoU LOI SLA Partnership Confidentiality Grant	Formal non-binding or binding understanding; structured template; versioned
Offer	Service Product Bundle Subscription Custom	A published value proposition: price, deliverables, terms, and duration
Deal	Exchange Investment Acquisition Revenue-Share Barter	A negotiated transaction in progress; multi-party; stage-gated
Request	Work Resource Collaboration Funding Information	An inbound ask from a user or org requiring a response or action
Proposal	Business Project Partnership Grant Creative Brief	A structured pitch or response to a request; draft → submitted → decided
Bid	Service Asset Auction Reverse-Auction	A competitive price offer in a marketplace or auction context
Investment	Equity Revenue-Share Convertible Donation Grant	A committed financial contribution in exchange for return, equity, or impact
Order	Product Service Subscription Custom	A confirmed purchase or engagement; triggers fulfillment workflow
Invoice	Service Deposit Recurring Final Credit	A financial demand document linked to a booking, contract, or order
Quote	Itemized Estimate Rough Order of Magnitude (ROM)	A non-binding price and scope estimate; precursor to contract or order

3.5 Capital & Physical Resources

Domain: CAPITAL_PHYSICAL — Tangible and financial assets under management

Resource	Subtypes	Description
Capital	Working Fixed Investment Reserve Operating	Financial resources available for deployment; tracked in kogi-bank accounts
Asset	Digital Physical IP Brand Equipment Vehicle Inventory	Any item of value owned or leased; depreciation-tracked; insurable
Artifact	Design Code Media Data Document Model Report	Produced output; versioned; with provenance and attribution chain
Labor	Contracted Employed Volunteer Contributed Gig	Human work capacity; costed; allocated; tracked against budget and timeboxes
Land	Residential Commercial Agricultural Mixed-Use	Real property parcel; title-tracked; linked to legal entity
Estate	Residential Commercial Portfolio Trust	A portfolio of real property assets under unified management
Real Estate	Property Development REIT Fractional	Real estate holdings including fractional ownership and development projects
Equipment	Owned Leased Shared Rented Tools Technology	Physical equipment; rental lifecycle; maintenance schedule; cost ledgering
Inventory	Goods Materials Supplies Products	Physical stock items tracked by quantity, location, and valuation
IP	Patent Trademark Copyright Trade Secret License	Intellectual property; registered or unregistered; licensed; revenue-generating
Data	Dataset Model Analytics Output Research Intelligence	Proprietary data assets; licensed; access-controlled; monetizable
Credit	Platform Gig Platform Reward Training Compute	Non-monetary credits redeemable within the Kogi ecosystem or partner platforms

3.6 Financial Instruments & Accounts

Domain: FINANCIAL_INSTRUMENTS — Equity, debt, cash, and alternative instruments

Instrument / Account	Subtypes	Description
Equity	Common Preferred Cooperative Revenue-Share SAFEs	Ownership stake in an entity or project; cap table tracked in kogi-bank
Liquidity	Cash Stablecoin Credits Redeemable Balance	Immediately deployable value; wallet and account balances
Debt	Microloan Line of Credit Convertible Note Invoice Financing	Borrowed capital; repayment schedule; interest; origination via kogi-bank
Taxes	Self-Employment Quarterly Sales Withholding	Tax obligations and estimated payments tracked against income and expenses
Cash	Operating Reserve Escrow Payroll Campaign	Physical or digital cash positions; journal and ledger entries
Credit	Platform Bank Vendor Community Lending	Available credit lines and facilities; utilization and limit tracking
Debit	Wallet Account Prepaid Community	Debit instruments and spend accounts; transaction history
Donation	One-time Recurring Matching In-Kind Anonymous	Non-expectation-of-return transfer; tracked for tax deductibility where applicable
Grant	Government Foundation Platform Community Pool	Award-based funding; milestone disbursement; impact reporting required
HSA	Health Savings Account	Pre-tax health expense fund; portable; rolls over annually
Retirement	SEP-IRA 401k PEP Pooled Employer Plan	Tax-advantaged retirement savings; contribution tracking; vesting schedule
Income Protection	Disability Sick Pay Occupational Accident	Insurance-backed income replacement for missed work or injury
Portable Savings	Gig Contribution Platform % Emergency Savings	Worker-portable benefit savings; funded by platform contributions
Revenue Share	Cooperative Investor Platform Partner	Formula-based periodic revenue distribution; automated via kogi-bank engine

3.7 Contributions

Domain: CONTRIBUTIONS — All forms of value contributed to the platform or community

A Contribution is a tracked, attributed, and potentially rewarded transfer of value from a contributor to a resource, project, community, or organization. All contributions generate a ContributionRecord appended to the target resource's EventLog.

Contribution Type	Sub-Types	Description & Attribution
Labor	Hours Tasks Deliverables Expertise On-Call	Work performed; tracked by hours or story points; attribution weight computed by CollaborationEngine
Skills	Technical Creative Strategic Administrative Domain	Specialized capability contributed; recorded in contributor's skill portfolio
Financial	Cash Crypto Credit Platform Currency	Monetary contribution to a project, fund, or organization; ledgered in kogi-bank
Support	Customer Support Community Moderation Mentorship Coaching	Non-billable support activities; tracked for community health metrics
Advertising	Paid Ad Sponsored Content Cross-Promotion Listing Boost	Paid exposure contributions; campaign-linked; ROI tracked
Marketing	Content Creation SEO Email Social Copywriting	Marketing labor and materials contributed; campaign-attributed
Promotions	Discount Offer Bundle Affiliate Referral	Value-exchange promotional contributions; tracked for conversion analytics
Endorsements	Testimonial Badge Certification Review Recommendation	Trust signal contributions; linked to contributor identity and credential
Donation	One-time Recurring In-Kind Matched Anonymous	No-return-expected transfer; tax receipt available; impact tracked
Investment	Equity Revenue-Share Convertible SAFE Loan	Return-expected capital deployment; cap table and ledger entries created

Contribution Attribution Model

Field	Description
contributor_id	User, org, or collective making the contribution
contribution_type	Labor Capital Asset Knowledge Artifact Marketing Endorsement
contribution_value	{ amount, unit, valuation_method } — monetary or effort-unit value

Field	Description
attribution_weight	f64 — relative share used in distribution calculations; computed by CollaborationEngine
governance_status	PendingReview Accepted Rejected Merged — configurable review gate
linked_ledger_entry	Option<LedgerId> — kogi-bank ledger entry for capital contributions
reward_rules	Vec<RewardRule> — equity allocation revenue share direct payment badge credits
timestamp	ISO 8601 contribution event time; immutable

4. Users, Roles & Personas

The Kogi platform models human participants as a layered identity system: a base User entity with one or more Profiles, each Profile carrying typed Roles, class-based Personas, and worker-type classifications.

4.1 User Roles

User roles govern access, action privileges, and notification routing within any resource context. Roles are scoped per resource instance and can be inherited from parent containers.

Role	Access Level	Capabilities
Owner	Full control	CRUD, governance, policy management, role assignment, deletion, transfer
Editor	Read + Write	Create, update, publish, manage content; cannot delete or transfer ownership
Contributor	Read + Contribute	Submit contributions; create linked sub-items; cannot edit parent resource
Viewer	Read only	View and comment only; no modification rights
Subscriber	Notification access	Receives updates and alerts on resource changes; no edit rights
Follower	Social access	Social follow; activity feed updates; public content access
Watcher	Activity monitoring	Receives all state-change notifications; used for oversight and review
Investor	Financial + View	Access to financial performance data, distributions, and cap table position
Donor	Social + Receipt	Donation confirmation, impact tracking, tax receipt access
Steward	Governance role	Reviews and approves contributions, governance proposals, and compliance items
Reviewer	Review gate	Required approval step on configured governance transitions
Moderator	Community control	Content moderation, member management within a space or org

4.2 Personas

Personas are interest and identity classifications that inform personalization, recommendation, matching, and community cohesion. A user may carry multiple personas simultaneously. Persona data shapes the PersonalizationEngine and MatchEngine outputs.

Persona	Cluster	Primary Resource Affinity	Platform Engagement Pattern
Developer	Technical	Code, APIs, toolchains, technical docs	Build integrations; contribute code; use Exchange for technical services
Creative	Creative	Portfolio, media, design assets, studios	Publish work; monetize via Marketplace; join creative collectives
Artist	Creative	Portfolio, bookings, media files, fan community	Manage touring, merch, licensing; use booking + logistics
Writer	Creative	Documents, publications, content campaigns	Publish articles; manage clients via CRM; sell content licenses
Journalist	Creative	Research dossiers, publications, sources	Track stories as projects; manage sources; publish to community feed
Professional	Professional	Credentials, client CRM, proposals, invoices	Manage service business; CRM + booking + invoicing
Enthusiast	Consumer	Community feeds, events, reviews, resources	Discover, follow, donate, and participate in community initiatives
Hobbyist	Consumer	Personal portfolio, learning resources, community	Share projects; join interest spaces; access learning resources
Service Provider	Commerce	Bookings, gigs, offers, contracts, reviews	List services; manage bookings; earn via Marketplace
Visionary	Strategic	Strategy docs, roadmaps, initiatives, proposals	Author strategies; rally contributors; lead initiatives
Architect	Technical	System designs, frameworks, models, documentation	Design systems; contribute frameworks; advise programs
Designer	Creative	Design files, UI components, brand assets	Create and sell design assets; collaborate on product teams
Facilitator	Operations	Agendas, playbooks, meeting records, retrospectives	Run collaborative sessions; document outcomes; manage group workflows
Integrator	Technical	APIs, connectors, toolchains, automations	Build integrations; publish tools to Marketplace; consult on automation
Organizer	Community	Events, spaces, initiatives, membership	Coordinate community activities; manage organizations and collectives
Activist	Community	Initiatives, campaigns, grant pools, petitions	Drive social initiatives; coordinate crowdresourcing; manage advocacy campaigns
Manager	Operations	Projects, teams, boards, resource allocations	Oversee delivery; manage backlogs; allocate resources; report on KPIs
Director	Strategic	Programs, OKRs, portfolios, financials	Set strategy; govern programs; manage stakeholders and budgets
Insider	Networked	CRM contacts, deals, intel, exclusive resources	Deal sourcing; relationship management; access gated community content
Hacker	Technical	Code, exploits (ethical), technical research	Bug bounty; security research; technical deep-dives

Persona	Cluster	Primary Resource Affinity	Platform Engagement Pattern
Technician	Technical	Equipment, SOPs, maintenance logs, work orders	Manage physical assets; log maintenance; fulfill service work orders
Innovator	Strategic	R&D projects, prototypes, patents, experiments	Run innovation sprints; document experiments; file IP records
Technologist	Technical	Emerging tech, research, tools, frameworks	Research and publish insights; advise on technology adoption

4.3 Worker Types

Worker type classifications determine platform feature access, contract templates, tax treatment, benefit eligibility, and Marketplace listing capabilities. A user may hold multiple worker type designations simultaneously.

Worker Type	Platform Capabilities	Benefit & Tax Context
Contractor	Gig listings, project contracts, invoicing, bookings, multi-client CRM	1099 / self-employment; HSA eligible; SEP-IRA eligible; portable benefits
Consultant	Consultation packages, retainer billing, proposals, thought leadership	1099 / LLC; full portable benefits suite; income protection eligible
Gig Worker	Gig claims, rapid booking, task queues, platform contribution tracking	Portable savings account; gig platform contribution % tracking; income protection
Freelancer	Service listings, project portfolios, client management, milestone billing	1099; HSA; portable savings; professional development account
Entrepreneur	Company portfolios, equity crowdfunding, team management, cap table	Self-employed; full equity and tax toolset; PEP eligible
Micropreneur	Solo product listings, subscriptions, microsite, community monetization	Simplified tax tracking; portable benefits; emergency savings
Coach	Consultation booking, program creation, community spaces, certification	Service business tools; CRM; recurring billing; professional development
Partner	Co-ownership of portfolios, revenue sharing, co-branding	Revenue share tracking; cooperative treasury participation
Employee	Organization portfolio access, team boards, payroll via kogi-bank	Benefits administered by org; potential PEP participation
Officer	Org governance, signatory authority, multi-sig approvals, cap table	Director-level fiduciary controls; org-level financial management

5. Organizations

Organizations are first-class resource entities on the Kogi platform. An organization owns a Portfolio, holds financial accounts in kogi-bank, manages member roles, and participates in the Marketplace, Exchange, and Community modules. All organization types share the base Organization data model with type-specific governance extensions.

5.1 Organization Types

Organization Type	Governance Model	Key Platform Capabilities
Autonomous / Independent Org	Self-governed; founder-led; configurable bylaws	Full portfolio, bank, marketplace, exchange; define own governance rules; multi-sig treasury
Ad-hoc Organization	Lightweight; temporary; no formal charter required	Quick spin-up; shared workspace; disbands cleanly; assets redistributable
Open Source Community	Maintainer-led; contributor meritocracy; RFC process	Public repository-linked portfolio; contribution attribution; bounty system; governance proposals
Cooperative	One member, one vote; democratic; profit-sharing bylaws	Cooperative treasury; revenue distribution engine; PEP benefits; member equity accounts
Collective	Open contribution; light moderation; consensus-preferred	Shared portfolio; crowdresourcing campaigns; mutual aid fund; group economics
Federation	Inter-org governance; delegated authority; federated identity	Cross-org portfolio; inter-org governance protocol; federation treasury; joint campaigns
Autonomous / Independent Team	Team lead authority; scoped to a project or program	Team boards, backlogs, shared portfolio; booking and logistics for team resources
Ad-hoc Group	Informal; no charter; temporary coordination	Shared workspace; basic backlog; group messaging; lightweight resource sharing
Council	Representative body; delegated authority; formal agenda	Governance proposals; voting records; policy authoring; inter-org coordination
Assembly	All-member participatory governance; quorum-required	Community-wide governance events; proposal lifecycle; ratification records; broadcast communications

5.2 Organization Base Data Model

Field	Description
<code>org_id</code>	UUID — immutable platform-wide identifier

Field	Description
org_type	Enum: Cooperative Collective Federation OpenSource Autonomous AdHoc Team Council Assembly
name	Legal or display name
slug	URL-safe unique handle
charter_id	ArtifactId of founding charter document; versioned
bylaws_id	ArtifactId of bylaws or operating agreement; versioned
members	Vec<MemberRecord> — each with EntityId, role, join date, contribution weight
governance_config	GovernancePolicy — vote thresholds, quorum, approval gates, multi-sig settings
treasury_account_id	kogi-bank cooperative treasury account; multi-sig controlled
portfolio_id	Root portfolio for the organization
legal_entity	Option<LegalEntity> — LLC Corp Trust Fund Informal
tax_id	Option<String> — EIN or equivalent; used for grant and payment processing
public_profile_id	Community-facing profile; public portfolio view; member directory
initiatives	Vec<InitiativeId> — active platform initiatives this org is enrolled in
linked_orgs	Vec<OrgLink> — federations, partnerships, or coalition memberships
created_at / updated_at	ISO 8601 timestamps

5.3 Organization Governance Features

Feature	Description	Governance Gate
Membership Management	Invite, onboard, offboard, and role-change members	Admin or Council approval
Governance Proposals	Formal proposals for policy changes, budget approvals, initiative launches	Vote: simple majority supermajority unanimous (configurable)
Multi-Sig Treasury	M-of-N required approvals for disbursements above threshold	Configured at org creation; threshold per transaction size
Revenue Distribution	Automated periodic payroll or revenue share computation and payout	Treasurer triggers; governance vote approves; batch multi-sig executes
Initiative Enrollment	Join platform-coordinated initiatives (portable benefits, grants, equity crowdfunding)	Admin approval; member vote for large financial commitments
Federated Identity	Cross-org identity: members can act on behalf of the org in federated spaces	Delegated authority; role-scoped; revocable
Audit & Compliance	Full EventLog of all org actions; exportable governance reports	Always-on; immutable
Dissolution Protocol	Formal winding-down: asset distribution, member notification, archive	Supermajority + legal entity requirements

6. Resource Lifecycle

All Kogi resources move through a defined lifecycle state machine. States are enforced by the ResourceEngine; transitions may require governance approval depending on the resource type and policy configuration.

6.1 Universal Lifecycle States

State	Description
Draft	Resource is being authored; not yet visible outside the creator's workspace
Active	Resource is live; visible and actionable per its visibility setting
Paused	Temporarily suspended; retains state; not actionable; restorable
Completed	Work or transactional resource has reached its terminal success state
Cancelled	Terminated before completion; reason logged; relevant parties notified
Archived	Closed out; moved to deep storage; read-only; full restore available
Deleted	Soft-deleted; removed from all views; hard-delete after retention period
Under Review	Governance review in progress; mutations blocked pending approval
Disputed	Active dispute between parties; escrow or access may be locked pending resolution

6.2 Resource-Specific Lifecycle Extensions

Resource Domain	Additional States	Trigger Condition
Commerce / Contracts	Inquiry → Quoted → Negotiating → Signed → In-Delivery → Settled → Closed	Client-provider interaction flow
Financial Instruments	Proposed → Subscribed → Funded → Vesting → Distributing → Redeemed Expired	Capital raise or instrument lifecycle
Work Execution	Backlog → Ready → In Progress → In Review → Done → Released	Agile / WBS delivery flow
Grants	Discovered → Applied → Under Review → Awarded → Disbursing → Reporting → Closed	Grant management flow
Contributions	Submitted → Pending Review → Accepted Rejected → Merged → Distributed	Contribution review and attribution flow
Organizations	Forming → Active → Growing → Restructuring → Dormant → Dissolving → Dissolved	Organizational health lifecycle

7. Resource Analytics

Every resource generates analytics data captured by the AnalyticsEngine and TelemetryEngine. Analytics are surfaced on individual resource dashboards, portfolio rollups, organizational reports, and the community feed.

7.1 Universal Analytics Metrics

Metric Category	Metrics	Engine
Engagement	Views, unique visitors, time-on-resource, interaction count, save/bookmark rate, share rate	AnalyticsEngine
Social	Follows, subscribers, likes/reactions, comments, reposts, mentions, hashtag spread	AnalyticsEngine
Contribution	Contribution count, contributor diversity, contribution velocity, attribution weight distribution	CollaborationEngine
Commerce	Inquiry-to-close rate, average deal size, booking utilization, repeat client rate, LTV	CRMEngine
Financial	Revenue generated, expenses incurred, profit margin, grant received, investment raised	kogi-bank
Work Performance	Velocity, throughput, cycle time, lead time, defect rate, sprint completion %	AnalyticsEngine + OptimizationEngine
Growth	Follower growth rate, member growth, resource creation rate, network expansion index	TelemetryEngine
Sentiment	Community sentiment score, review ratings, endorsement velocity, NPS equivalent	RecommendationEngine
Risk	Blocker count, dependency chain depth, overdue items, budget variance, compliance gaps	RiskEngine

7.2 Resource-Level Dashboard Widgets

Widget	Description
Resource Health Score	Composite score (0–100) across activity, governance compliance, contribution health, and financial status
Engagement Trend	30/90-day rolling engagement trend chart; breakout by action type
Contributor Map	Visual network map of active contributors with attribution weights
Financial Summary	Revenue, expenses, allocations, and outstanding obligations; kogi-bank data
Work Progress	WBS completion percentage; velocity trend; milestone countdown
Lifecycle Stage	Current state with time-in-state and projected next transition

Widget	Description
Dependency Graph	Visual graph of upstream and downstream dependencies; blocker highlighting
Governance Activity	Recent proposals, votes, approvals, and audit entries
Oba Recommendations	AI-generated action recommendations based on resource state, analytics, and platform signals

8. Engine Integrations

KOGI-RMS is computation-agnostic at the data layer. All intelligence is provided by the Kogi Engine layer, accessed via the EngineGrpcServer on port 9100. The following engines serve KOGI-RMS directly:

Engine	Role in Resource Management
AnalyticsEngine	Computes all engagement, performance, and usage analytics for every resource type
TelemetryEngine	Real-time event streaming: resource state changes, user activity, system events
RecommendationEngine	Personalized resource discovery; 'resources you may need'; cross-type recommendation
PersonalizationEngine	Persona-aware UI surfaces; priority sorting of resources per user profile
MatchEngine	Worker-to-gig, resource-to-need, investor-to-campaign matching across resource types
GraphEngine	Dependency graph computation; resource relationship traversal; impact analysis
RiskEngine	Risk scoring for commitments, dependencies, financial instruments, and org governance
OptimizationEngine	Resource allocation optimization; capacity planning; portfolio health scoring
SearchEngine	Full-text and structured search across all resource types, metadata, and content
AllocationEngine	Human and physical resource allocation; conflict detection; over-allocation warnings
IncentiveEngine	Contribution attribution; reward computation; cooperative revenue distribution
CollaborationEngine	Shared portfolio coordination; concurrent edit conflict resolution; attribution weighting
BenefitsEngine	Benefits eligibility scoring for worker types; contribution tracking; coverage optimization
GrantEngine	Grant matching by eligibility, portfolio strength, and historical data
CRMEngine	Lead scoring and pipeline management for commerce resources
BookingEngine	Scheduling optimization; conflict detection; resource calendar coordination
LogisticsEngine	Physical resource routing; equipment tracking; crew schedule optimization
DataStreamingEngine	Real-time data export; BI connector feeds; event bus for third-party integrations
GameEngine	Gamification: contribution points, badges, streaks, community leaderboards

9. Cross-System Platform Integrations

KOGI-RMS does not operate in isolation. Resource data flows bidirectionally across every Kogi subsystem. The following integration matrix defines the primary data exchange surfaces:

Kogi System	Integration Surface	Resource Flow
Portfolio System	All KOGI-RMS resources are Portfolio Components; full CRDT, EventLog, governance, and analytics framework inherited	Bidirectional: all resource mutations sync to Portfolio EventLog
kogi-bank	Financial resources (accounts, instruments, grants, invoices) originate in kogi-bank; budgets and expenses flow back to resource dashboards	Bidirectional: resource financial actions write to bank ledgers
Marketplace	Commerce resources (gigs, offers, deals, proposals, bids) published to Marketplace; applications flow into resource assignment workflows	Outbound: publish; Inbound: inquiries, bids, applications
Exchange	Portfolio assets, equity stakes, revenue streams, IP, data — listed and traded on Exchange; settlement back to kogi-bank	Outbound: list; Inbound: bids, offers, settlement events
Community & Spaces	Resources shared to community spaces; crowdresourced contributions; initiative enrollment; organization membership and governance	Bidirectional: publish to community; contributions flow back
Work Management (WMS)	Work execution resources (boards, stories, tasks, sprints) are dual-registered in RMS and WMS; analytics unified	Bidirectional: WMS and RMS share the same underlying data model
Developer / API	All resource types accessible via REST and gRPC; webhook notifications on lifecycle transitions; SDK helpers for typed resource creation	Full CRUD via kogi-api; event subscriptions
Profiles & Personas	Persona data shapes resource recommendations, search ranking, and matching; user role assignments persisted per resource	Profile data informs MatchEngine and PersonalizationEngine

10. Glossary

Term	Definition
Resource	Any entity — structured or unstructured, human or non-human — that has value, can be acted upon, and can be associated with a Portfolio component
ResourceType	The top-level classification of a resource: Portfolio_Work Planning_Time Work_Execution Commerce_Contracts Capital_Physical Financial_Instruments Contributions
ContributionRecord	An append-only attribution record in a resource's EventLog tracking who contributed what, valued how, and weighted how in distribution calculations
Portfolio Component	The base data model for all items on the Kogi platform; every resource is a Portfolio Component with CRDT versioning and EventLog auditing
Persona	An identity and interest classification assigned to a user that shapes recommendation, matching, and community surfaces
Worker Type	A platform classification of a user's working arrangement (contractor, gig worker, freelancer, etc.) that governs benefit eligibility and tax treatment
Organization	A first-class resource entity representing a collective of users with shared governance, treasury, portfolio, and membership
Cooperative	A worker-owned organization with democratic governance and revenue-sharing bylaws; managed via cooperative treasury in kogi-bank
Federation	A cross-organization meta-entity enabling joint governance, shared portfolio, and inter-org resource exchange between aligned organizations
Multi-Sig Treasury	An organization bank account requiring M-of-N approver signatures for disbursements above a configured threshold
Portable Benefits	Worker-centered benefits (health, retirement, PTO, insurance, professional development) that travel with the individual, not the employer
Crowdresourcing	Community-sourced contributions of labor, assets, knowledge, and capital to a shared resource or project
Timebox	A fixed time period bounding a set of committed work items (sprint, PI, quarter, custom duration)
Lifecycle State	The current stage in a resource's state machine (Draft, Active, Archived, etc.); transitions may require governance approval
EventLog	An append-only, tamper-evident audit history attached to every resource recording all mutations with actor, timestamp, and delta
Oba	The Kogi AI assistant; surfaces resource recommendations, analytics summaries, governance alerts, and optimization suggestions across all resource types
MatchEngine	The Kogi engine responsible for matching workers to gigs, resources to needs, and investors to campaigns based on multi-dimensional compatibility scoring
CRDT	Conflict-free Replicated Data Type — the distributed data structure enabling safe concurrent edits across all resource types
