v2.1 · Kogi Platform · March 2026

15 — Shared Portfolios & Portfolio Collaboration

The Kogi Community layer is where shared portfolios and portfolio collaboration come to life. Any space, organization, collective, cooperative, or federation can create and manage a shared portfolio — jointly owned, governed, and attributed to multiple members.

Shared Portfolio Types

Type	Description	Governance Model
Team Portfolio	Shared working portfolio for a project team or squad	Admin-controlled; team leader can override
Organization Portfolio	Formal portfolio for an org entity (LLC, Corp, Trust, Fund)	Multi-sig + governance proposal for major changes
Collective Portfolio	Informal shared portfolio for a resource-sharing collective	Open contribution; light moderation
Cooperative Portfolio	Worker-owned portfolio with equity distribution	Full member vote required for major changes
Federation Portfolio	Cross-org portfolio spanning multiple federated spaces	Inter-org governance protocols; federated identity
Crowdresourced Portfolio	Portfolio component open to community contributions	Contribution ledger; steward review and merge

Portfolio Resource Sharing — Resource Categories

Category	Examples
Artifacts & Templates	Contract templates, design files, playbooks, guides, documentation sets
Tools & Toolchains	Shared tool integrations, toolkits, automated workflows, CI/CD pipelines
Capital & Credits	Shared budget allocations, resource credits, compute pools
Labor & Skills	Time contributions, skill offers, task assignments within collaborative projects
Knowledge & Data	Research, datasets, analysis outputs, strategic intelligence
Contacts & Networks	Shared contact books, client databases, lead pools (with consent)

Contribution Attribution Data Model

All contributions to a shared portfolio item are tracked as ContributionRecord objects appended to the component's EventLog:

```
ContributionRecord {
  contributor_id:      EntityId,           // user | org | collective
  contribution_type:   ContributionType,   // Labor | Capital | Asset |
Knowledge | Artifact
```

```

    contribution_value:      { amount, unit, valuation_method }
    attribution_weight:      f64,                               // used in distribution calculations
    governance_status:      PendingReview | Accepted | Rejected | Merged
    linked_ledger_entry:    Option<LedgerId>, // kogi-bank entry for capital
    contributions
}

```

Portfolio Collaboration Workflow

Stage	Description
Open Contribution	Portfolio owner creates CrowdfundingCampaign; specifies contribution types, review policy, reward rules
Contribution Submitted	Contributor submits labor, asset, capital, or knowledge contribution
Steward / Governance Review	Configurable: AutoAccept StewardReview GovernanceVote
Merge / Accept	ContributionRecord created; appended to EventLog; attribution weight updated
Distribution Event	Periodic or milestone-triggered; kogi-bank executes distribution to member accounts

16 — Booking, Scheduling, CRM & Logistics

Booking & Scheduling System (KBKG)

Feature	Description
Centralized Calendars	Unified calendar aggregating all bookings, events, project milestones, personal schedules
Multi-Worker / Multi-Artist Dashboards	Dashboard showing all member schedules, availability windows, booking conflicts
Conflict Detection	Automated detection of scheduling conflicts across team members, resources, venues; Oba alerts
Event Booking & Reservation Management	Full booking lifecycle: request → quote → confirm → deposit → delivery → close
Availability Management	Worker-defined availability windows with blackout dates, recurring blocks, buffer time
Resource Booking	Book equipment, studio space, venues, or shared resources alongside worker time
Booking Analytics	Utilization rates, booking-to-revenue conversion, peak demand periods, cancellation rates

CRM & Lead Management System (KCRM)

Feature	Description
Lead Capture Forms	Embeddable forms linked to worker/org profile pages; leads flow into CRM pipeline
Client Database Management	Searchable client records: contact info, booking history, spend, communication log, tags, notes
Pipeline Management	Kanban pipeline: Inquiry → Qualified → Proposal → Negotiation → Booked → Retained
Automated Follow-up Emails	Triggered sequences on stage changes, quote expiry, post-event follow-ups via kogi-providers
Lead Scoring	CRMEngine scores leads by probability-to-book based on interaction history, budget signals, match quality
Client Communication Log	All messages, emails, calls logged against the client's CRM record automatically
Retention Analytics	Repeat booking rates, lifetime value, churn signals; Oba recommends re-engagement campaigns

Contracts & Invoicing

Feature	Description
Customizable Automated Contracts	Contract templates with variable fields auto-populated from booking details; custom clauses supported
E-Signatures	Integrated e-signature workflow (DocuSign, HelloSign via ProviderSystem); status tracked
Automated Payment Reminders	Configurable deposit and balance due reminders; sent via kogi-bank invoice system
Recurring Billing	Subscription-based or retainer billing with automated recurring invoice generation
Contract Version Control	All contract revisions versioned; full audit trail in Portfolio System

Logistics & Communication System (KLGS)

Feature	Description
Tour / Project Itinerary Planning	Multi-stop itinerary builder with timeline view; links to bookings, venues, and team assignments
Resource Allocation	Assign equipment, vehicles, and crew to specific dates/times/locations; conflict detection
Logistics Tracking	Live tracking: equipment rental status, transportation, crew check-ins, venue setup progress
Equipment Rental Management	Owned and rented equipment inventory; rental period tracking; return reminders; cost ledgering

Feature	Description
Transportation Management	Vehicle assignments, routing, mileage tracking, driver schedules
Crew Schedule Management	Role-based crew assignments per event/day; call times, breaks, wrap times; automated distribution
Finance & Reporting	Real-time expense tracking vs. event budget; P&L per booking; tax report generation

17 — Initiatives

Initiatives are platform-coordinated programs for collective action within the Kogi Community — structured frameworks for organizations, collectives, and cooperatives to coordinate around shared goals.

Initiative Type	Description
Portable Benefits Initiative	Coordinate independent workers to pool buying power for health, dental, vision, or retirement through a PEP or collective insurance arrangement
Grants Initiative	Community-organized grant discovery, collective application, and fund distribution; managed by a designated steward committee
Microfinancing Initiative	Community lending pool where members contribute capital and access microloans at community-set rates; governed by lending policy proposals
Group Economics Initiative	Formal program for collective purchasing, shared revenue, cooperative investment, or group crowdfunding
Equity Crowdfunding Initiative	Platform-coordinated campaign series where multiple community members or projects raise capital from the broader community
Crowdresourcing Initiative	Open call for community contributions (labor, assets, knowledge) to a shared portfolio program or community infrastructure project
Shared Portfolio Initiative	Structured program to create, manage, and grow a federation-level or community-level shared portfolio

Updated Terminology

Term	Definition
Shared Portfolio	A portfolio jointly owned, managed, or contributed to by multiple users, teams, or organizations
Portfolio Collaboration	A structured multi-contributor workflow on a shared portfolio component with attribution tracking

Term	Definition
Group Economics	Collective financial structures: cooperative treasury, revenue sharing, group investment, mutual aid
Portable Benefits	Worker-centered benefits (health, retirement, PTO, insurance) that travel with the individual, not the employer
Crowdresourcing	Community-sourced contributions of labor, assets, and knowledge to shared portfolio items
Equity Crowdfunding	Community capital raising via Reg CF equity, revenue share, SAFE, or donation instruments
Initiative	A platform-coordinated program for collective action: portable benefits, grants, group economics, crowdresourcing
Grant Pool	A collectively managed fund for distributing grants to community members or projects
BenefitsEngine	Engine subsystem for benefits eligibility scoring, contribution tracking, and coverage optimization
CollaborationEngine	Engine subsystem coordinating shared portfolio workflows, contribution attribution, conflict resolution
BookingEngine	Engine subsystem for scheduling optimization, conflict detection, and resource allocation
CRMEngine	Engine subsystem for lead scoring, pipeline management, and follow-up automation
LogisticsEngine	Engine subsystem for itinerary planning, resource routing, and crew/equipment scheduling
